

ShoppingMart — Data Analysis & Key Recommendations

Prepared by Shreyas Kulkarni

Overview

3,552

Transactions cleaned and merged
with a 160-product catalog

KPI Dashboard

Revenue trends analyzed and
visualized across categories and time

3 Recommendations

Key business actions surfaced from
the data

Recommendation 1: Prioritize Electronics, Manage Concentration Risk

Top Revenue Driver

Electronics generates **2x+ the revenue** of the next-highest category (Footwear)

Monitor

Category diversification to avoid over-reliance on one segment

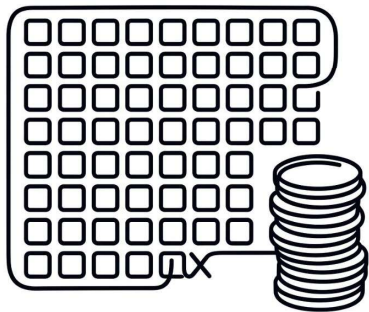

Action

Prioritize Electronics inventory and marketing spend

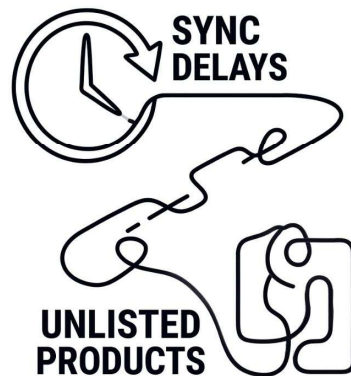

Recommendation 2: Fix Product Data Integration

**DATA INGRTRY
INTEGRITY GAP
67 UNMATCHED
TRANSACTIONS**

**ACROSS 23
PRODUCT IDs**

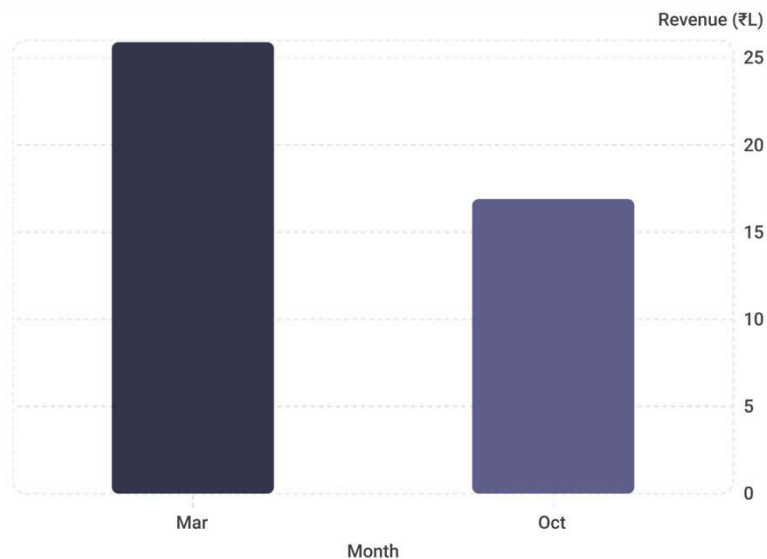

**IMPACT: ~2%
REVENUE
CAUSED BY:
SYNC DELAYS
NEW PRODUCT IDs**

- 1 Implement point-of-sale product ID validation
Catch mismatches at the moment of transaction
- 2 Monthly reconciliation check
Align sales records with product master data every month

⚠ 67 transactions (~2% of revenue) couldn't be matched to the product catalog

Recommendation 3: Investigate Seasonal Revenue Pattern

 Investigate March Peak (₹25.9L)

Was the spike promotion-driven? Identify and replicate the trigger.

 Investigate October Dip (₹16.9L)

Fewer selling days or reduced footfall? Quantify the cause.

 Plan

Run targeted campaigns for next year based on findings

Thank You
